

Tim Sullivan

Product systems, workflow automation, and evidence-backed artifacts

A two-page route for evaluating public work: what changed, what was built, and where implementation proof lives.

What to inspect first

- Portfolio
- Outcome board
- Operating model
- Systems lab
- GitHub

43

passing public tests

25

SquadBrain tests

18

Lasting Ground tests

CI

repeatable checks

MOBI

98.3% line coverage - TypeScript - ADRs

SquadBrain: competitive practice system

Replayable practice with adaptive priority, matchmaking, achievements, and validated results.

INPUT -> RULES -> PROOF

EVID

93.29% line coverage - Python - PDF

Lasting Ground: source-bounded packet system

Source lanes, support-depth states, validation gates, cautious language, and a sample packet.

INPUT -> RULES -> PROOF

Capability signals

Product judgment

Turns workflows into clear surfaces, demos, states, and readable outputs.

Systems thinking

Models rules, scoring, validation, review boundaries, and source states.

Evidence discipline

Shows uncertainty, support depth, and proof links instead of vague claims.

Delivery maturity

Ships tests, coverage, CI, docs, ADRs, and sample artifacts.

FAST REVIEW ROUTE

outcomes -> model -> lab

Clickable links embedded

Proof routes, review timing, and public artifacts

Use this page to choose the right depth of review. Every route points to public artifacts that can be opened directly.

scan for live packet

1 minute

Open the outcome board and check the two project evidence trails.

5 minutes

Run the systems lab, then open one code example from each project.

15 minutes

Read the operating model, decision records, and coverage summaries.

Full review

Start at the evaluator console and follow the role-specific path.

Public evidence map

SQUADBRAIN

Live surface

SquadBrain demo

Executable logic

TypeScript examples

Quality proof

25 tests / 98.3% line coverage

System boundary

Result validation / adaptive practice

LASTING GROUND

Live surface

Lasting Ground demo

Executable logic

Python examples

Quality proof

18 tests / 93.29% line coverage

System boundary

Evidence scoring / support depth

EVALUATION RULE

Treat a claim as strong only when it links to a working demo, public example, test/coverage artifact, decision record, or sample output.
