

Tim Sullivan

Product systems, workflow automation, and evidence-backed artifacts

A one-page route for evaluating public work: what changed, what was built, and where implementation proof lives.

FAST REVIEW ROUTE

outcomes -> model -> lab

Lasting Ground tests

CI

repeatable checks

MOBILE PRODUCT SYSTEM

98.3% line coverage - TypeScript - ADRs

SquadBrain: competitive practice system

Replayable practice with adaptive priority, matchmaking, achievements, and validated results.

EVIDENCE SYSTEM

93.29% line coverage - Python - PDF

Lasting Ground: source-bounded packet system

Source lanes, support-depth states, validation gates, cautious language, and a sample packet.

Capability signals

Product judgment

Turns workflows into clear surfaces, demos, states, and readable outputs.

Systems thinking

Models rules, scoring, validation, review boundaries, and source states.

Evidence discipline

Shows uncertainty, support depth, and proof links instead of vague claims.

Delivery maturity

Ships tests, coverage, CI, docs, ADRs, and sample artifacts.
