

TIM SULLIVAN

AI Solutions Consultant | Applied AI Workflow Systems

hello@lastingground.com | sulmusic2-star.github.io | github.com/sulmusic2-star

Summary

AI workflow and product builder with hands-on experience translating fragmented, data-heavy processes into working systems. Built Lasting Ground, an address-based public-record review product with official-source traceability, explicit unresolved states, and controlled release gates. Experienced with agent architecture, MCP, REST and GIS integrations, evaluation harnesses, process design, and concise customer-facing explanation.

Selected experience

LASTING GROUND — Creator / Applied AI Systems Builder April 2026–present

- Mapped a multi-source property-record review into defined intake, source, normalization, matching, answer, unresolved-item, and release stages.
- Built workflows across federal, state, regional, and municipal data using Python, FastAPI, REST and ArcGIS services, Cloudflare, address resolution, and server-side checkout.
- Defined a source-support contract requiring official-source traceability, checked dates, scoped wording, visible conflicts, and `Not confirmed` states when evidence is incomplete.
- Designed agent-assisted source research, implementation, testing, and regression triage while keeping compliance-adjacent customer answers on a deterministic path.
- Established review and promotion gates separating candidate, validated, customer-visible, and public states.

Public technical proof

Lasting Ground examples — Runnable validation and packet logic on synthetic input; 18 tests pass at 93% line coverage.

Agentic Engineering — Eval harness, drift check, Agent Skill, MCP retrieval and verification tools, and a documented build/review/promotion operating model.

GroundTruth-Geo — 33 government-cited benchmark items across seven states, a deterministic grader, reproducible fingerprints, and an MCP interface.

SquadBrain — React Native / Expo / TypeScript / Firebase iOS product shipped to the App Store; public logic examples pass 25 tests at 98.3% line coverage.

Capabilities

Consulting and design: Process discovery · workflow design · use-case prioritization · requirements · value/risk mapping · implementation proposals · success measures

AI and integrations: LLMs · agent architecture · MCP · Agent Skills · evaluation gates · REST APIs · ArcGIS/GIS · source connectors · human approval

Delivery: Python · FastAPI · TypeScript · React Native · Cloudflare · Firebase · Stripe · GitHub Actions · pytest · Vitest · ADRs
