# Product systems proof packet.

A compact review packet for public work across mobile product systems, evidence-backed workflows, validation logic, and generated artifacts.

SCAN LIVE PACKET

## Review route for public proof.

The packet is built for a fast evaluator: first understand the system, then open working evidence.

Portfolio

Outcome board

Systems lab

GitHub

43

PUBLIC TESTS

Across showcase repos

25

SQUADBRAIN

TypeScript tests

18

LASTING GROUND

Python tests

CI

DELIVERY

Repeatable checks

### Evidence stack

01

#### Outcome

What changed and why it matters.

02

#### Model

Rules, states, validation, and boundaries.

03

#### Lab

Runnable browser proof and examples.

04

#### Code

Coverage, ADRs, and public repos.

### Public artifact lanes

#### Demo

Working surfaces that can be opened immediately.

#### Examples

Executable logic in public repos.

#### Coverage

Test and coverage summaries.

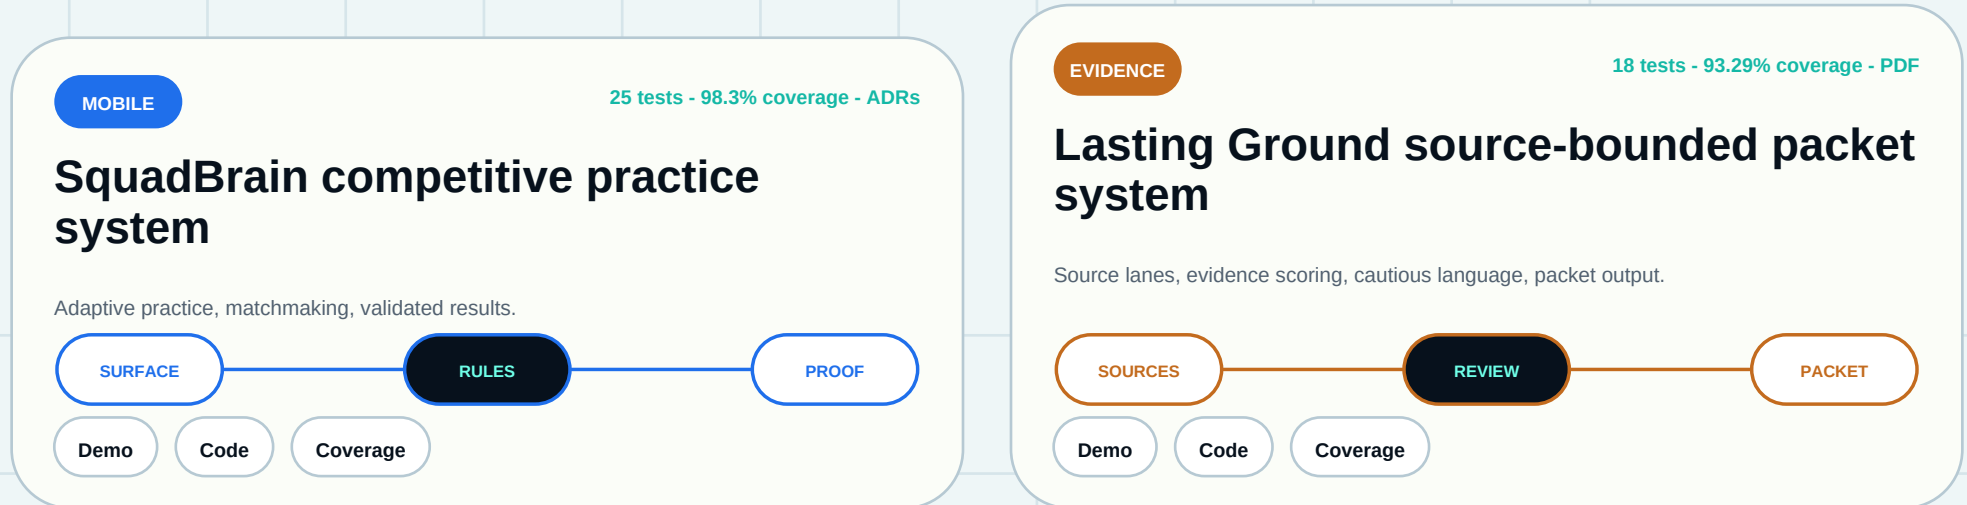

#### Packet

Generated outputs and proof routes.

# Two builds. One proof standard.

Each project is presented as a system: the visible product, the underlying rules, the validation boundary, and the artifact trail a reviewer can inspect.

## QUALITY RULE

**A claim is strong only when it routes to working product evidence, executable examples, tests, coverage, decision records, or generated outputs.**

This packet uses only public artifacts and avoids inflated outcomes that cannot be verified from the public trail.

# Choose depth. Open receipts. Decide fast.

The strongest public portfolio surface makes the reviewer path obvious: skim, run, inspect, then verify the implementation trail.

1 MINUTE

## Outcome board

Check the two evidence trails.

5 MINUTES

## Systems lab

Run the browser proof surface.

15 MINUTES

## Model + ADRs

Inspect operating model and decisions.

FULL REVIEW

## Evaluator console

Follow the role-specific route.

## Capability map

### Product UX

Mobile surfaces, demos, task states, and readable outputs.

### Systems logic

Rules, scoring, validation gates, and state transitions.

### Evidence work

Source lanes, cautious language, support depth, and proof routes.

### Delivery

Tests, coverage, CI, docs, ADRs, sample artifacts.

LIVE PACKET

### BOTTOM LINE

The public surface is built to show product judgment, operating logic, evidence discipline, and delivery maturity without making a reviewer guess.
